This is a wonderful laboratory manual. In regards to other people’s reviews... this is NOT meant to be a replacement for the textbook. It is difficult to read by itself but if you read the actual textbook and follow along with the laboratory manual, it makes perfect sense! And the answers are available on Evolve’s website. Just follow the instructions on the inside flap of the manual. I highly recommend this laboratory manual to help with retaining the information in the actual textbook. It may be redundant a bit, but redundancy has been shown to help with cognitive memory.

***EDIT 3/28/16*** After contacting Evolve Customer Support, I have been informed that the answers to the Lab Manual’s exercises are only available in the Instructor’s resources. The answers that you can access are for the Test Yourself Questions in the textbook, not the lab manual. I still highly recommend this lab manual because it does help reiterate things for me. If you want the answers to the Lab Manual exercises, please contact your instructor. Or you could just take a bit more time and recheck your work to see if you are correct.

Horrible!!! Why do you not warn people that pages cannot be printed. I spent $30 on a manual I cannot complete and submit. I need a hard cover book. Or a digital copy that I can print and submit on a PDF. This makes sense on textbooks not manuals. BS!!!!!!! I want my money back so I can afford a copy I can actually use.

This book would be great if it provided the answers also. If I cant check to see what I got right or wrong, it is completely useless.

I actually needed the one that is not the Laboratory Manual. I didn’t notice there were two different books that looked exactly alike. Oops.

Exactly what I needed. Great manual and activities for cat dissections, not so much for rabbits

This laboratory manual was spot on with the Clinical Anatomy textbook!

Love the layout of the book. Very nice pictures as well.

just what I need for my vet tech class
