Matter, Space And Radiation, Invitation To The Natural Physics Of

Synopsis

Experiments since 1911 prove that the distance between nuclear particles constituting atomic bodies is a hundred thousand times larger than the diameters of these particles. Hence the volumes of all atomic bodies including ourselves are space-like empty, a hundred times more empty than the volume of the solar system. Scores of experiments also prove that space contains electrons and positrons bound to each other by energies of a million electron volts per pair, and form a cubic lattice, named the epola. Based on the epola model of space, this book reveals the physical nature of inertia, gravitation, the spreading of electromagnetic and gravitational actions in space with the velocity of light, and derives their laws. The postulates of quantum and relativity theories are also derived and turned into explainable physical laws. Thus physics is restored as the natural science it had been before it was turned into a science of axiomatic statements and calculations. The book will appeal both to serious scientists and students as well as the general reader interested in scientific explanations of the physical world. Since as a natural science physics deals with the simplest and most basic natural phenomena, this book will be as accessible to the general public as biology books.

This EPOLA theory explains, with ONLY high school algebra, the physical reasons WHY there is Gravity, Magnetic fields, Electrostatic fields, Inertia, Momentum, stable Electron Orbitals, etc. This theory of the Universe is simply amazing, and incredibly simple. I highly recommend this book, JAC,

BS Nuclear Engineering!

It takes a couple of chapters to get into the details and there seems to be a language unfamiliarity issue but overcoming this Simhony provides a very clear and understandable explanation of why physical realities occur thru an electron positron lattice model of space. The model seems to explain all the physical interactions and phenomenon that I was exposed to during several years of undergraduate level physics and quite frankly explains properties taken as intrinsic such as "why does mass exhibit properties of inertia?". Simhony also explains the mass energy relation by dispelling the notion that energy creates mass or the spontaneous generation of particles when radiation is applied to the "vacuum of space" in that the mass was always within that space in the lattice and was merely bumped out of the lattice. I would love to see experiments directly conducted to prove or disprove Simhony's theory. Joseph
