Customer Reviews

This is the best, most up to date book on the subject that I know of. Magill has done such a good job with "R cubed" as some people call it, that it is a suggested introductory text and is offered for sale in the book stores of several well respected international research organizations. One of the biggest challenges in science is to keep up with the flood of information. Magill's book is the most current available.

Very interesting and useful book for teachers and students of this particular fields of study: Nuclear chemistry, Chemistry radiation and Radiological Protection.
