The Fourth Part Of The World: An Astonishing Epic Of Global Discovery, Imperial Ambition, And The Birth Of America

Synopsis

“Old maps lead you to strange and unexpected places, and none does so more ineluctably than the subject of this book: the giant, beguiling Waldseemüller world map of 1507. So begins this remarkable story of the map that gave America its name. For millennia Europeans believed that the world consisted of three parts: Europe, Africa, and Asia. They drew the three continents in countless shapes and sizes on their maps, but occasionally they hinted at the existence of a “fourth part of the world,” a mysterious, inaccessible place, separated from the rest by a vast expanse of ocean. It was a land of myth until 1507, that is, when Martin Waldseemüller and Matthias Ringmann, two obscure scholars working in the mountains of eastern France, made it real. Columbus had died the year before convinced that he had sailed to Asia, but Waldseemüller and Ringmann, after reading about the Atlantic discoveries of Columbus’s contemporary Amerigo Vespucci, came to a startling conclusion: Vespucci had reached the fourth part of the world. To celebrate his achievement, Waldseemüller and Ringmann printed a huge map, for the first time showing the New World surrounded by water and distinct from Asia, and in Vespucci’s honor they gave this New World a name: America. The Fourth Part of the World is the story behind that map, a thrilling saga of geographical and intellectual exploration, full of outsize thinkers and voyages. Taking a kaleidoscopic approach, Toby Lester traces the origins of our modern worldview. His narrative sweeps across continents and centuries, zeroing in on different portions of the map to reveal strands of ancient legend, Biblical prophecy, classical learning, medieval exploration, imperial ambitions, and more. In Lester’s telling the map comes alive: Marco Polo and the early Christian missionaries trek across Central Asia and China; Europe’s early humanists travel to monastic libraries to recover ancient texts; Portuguese merchants round up the first West African slaves; Christopher Columbus and Amerigo Vespucci make their epic voyages of discovery; and finally, vitally, Nicholas Copernicus makes an appearance, deducing from the new geography shown on the Waldseemüller map that the earth could not lie at the center of the cosmos. The map literally altered humanity’s worldview. One thousand copies of the map were printed, yet only one remains. Discovered accidentally in 1901 in the library of a German castle it was bought in 2003 for the unprecedented sum of \$10 million by the Library of Congress, where it is now on permanent public display. Lavishly illustrated with rare maps and diagrams, The Fourth Part of the World is the story of that map: the dazzling story of the geographical and intellectual journeys that have helped us decipher our world.

Book Information

Paperback: 496 pages

Publisher: Free Press; 1 edition (July 6, 2010)

Language: English

ISBN-10: 1416535349

ISBN-13: 978-1416535348

Product Dimensions: 5.5 x 1.2 x 8.4 inches

Customer Reviews

A six-star book, and one of my favorite book discoveries of the year. This is the kind of book that makes me wish that allowed us to award an extra bonus star to truly outstanding works. Remember all those hours we all spent in classrooms, at least one of which had a world map spread out across one wall, and how familiar that world came to look to us, with the Atlantic separating the Americas from the vast landmass of Europe and Asia, and Africa extending south between the Atlantic and Indian oceans? Well, in this fascinating and lively history, Toby Lester tells us how -- over the course of many centuries -- that map and the shape of the world it presents came to be understood and accepted, and how slowly and painfully that process was. Even more intriguing, it's the story of how a world view evolved over even more centuries; of how Europeans who once saw themselves as inhabiting a tiny island surrounding by vast amounts of ocean, with Jerusalem -- as their holy city -- at its center, came to understand the implications of voyages of discovery on foot, horseback and eventually by sea for their view of geographical reality. Travelers began to venture from Europe into unknown lands centuries before the map at the heart of this book that first identified America as a separate continent and named it after Amerigo Vespucci was first printed in eastern France in 1507. Those who came back -- Papal envoys from the Mongol court, Marco Polo from China and the East Indies -- had wondrous tales to spin -- but where, exactly, was it that they had been? Mapmakers scrambled to keep up.
