## Customer Reviews

These flashcards are an excellent aid to learning anatomy. They are a convenient size ideal for keeping in your bag and studying while travelling to and from college. Each card contains a view which has all the necessary information which can then be flipped over to show the diagram with blank spaces. Such a simple idea yet so effective in studying such a complex subject. Both the cat and dog series are well-priced and an essential study aide to any veterinary or animal science student.

Great product! I would suggest these to anyone who is learning carnivore anatomy. The only downfall is that I noticed not everything is labeled on the flash cards. For example, the stifle joint, although there are two separate cards for this topic, the lateral/medial femoropatellar ligament is not labeled. Neither is the cranial fibular ligament, but the caudal fibulgar ligament IS labeled?? Not sure about the reasoning for that. Also, if you are a veterinary student, the number of vertebrae is listed for the cat, dog, human, and horse - but the pig and ruminant is left out. These cards have a lot of information and are VERY helpful, but they are still lacking information. However, just get your pen

out and label what is missing by yourself! I added all sorts of notes to these flashcards and it has been a tremendous help. I would suggest these to anyone - they are far easier (and lighter!) to carry around in your bag instead of a heavy anatomy book.

I am a DVM student. I bought these cards to help learn the massive amount of structures necessary for anatomy. I, like other reviewers, found that there was way too much info on each card. I can get a picture with every muscle labeled on it in my dissection guide. I was looking for something that would help to quiz myself by having one or two structures per card. Also I found that the terminology used on the cards is not current with the standard veterinary nomina anatomica. Save your money, these cards aren't worth your time unless you need a very very basic overview.

I am a certified animal massage therapist and I think these cards are great. They are concise and accurate and the diagrams on each card are beautiful. I would highly recommend them for anyone that wants to know more about the anatomy of a dog. They're great!!

Nice Graphics :) A nice learning tool for the young want- to- be Veterinarians in your house,(or family )I bought as a gift for my niece, who yes wants to be a Veterinarian :) She loved the cards ,and would love to get other animals in flash cards .:)Bryan Edwards, does has other animals flash card set.

These notecards are moderately helpful; I had to write in more details that they lacked.

Awesome, love it, you can color the pictures which helps you study and remember the parts of anatomy, highly recommend this book for vet tech school!!!

I bought them to get a few basis of canine anatomy before following a canine first aid course. These cards are very well done one side you have the drawing with the names on the other side just the drawing for revising .
