Customer Reviews

I would recommend this book to anyone in oncology, both new graduates, students and seasoned veterans. It is a thorough, yet concise review of each drug and highlights what you really need to know, whether it's a refresher or your first time working with a drug.

The 2015 edition of CANCER CHEMOTHERAPY DRUG MANUAL reviews several new, expensive

and complex agents for CLL, NSCLC, Gastric cancer, and non-Hodgkin's lymphoma. Ibrutinib, Idelalisib, and Obinutuzumab are the new agents for CLL. Afatinib, Ceritinib, and Ramucirumab are indicated for NSCLC. The toxicities, indications, drug interactions, chemical structures, mechanisms of actions and drug ranges are clearly explained. My suggestion is that health professionals use this manual as a guide to drugs mentioned in the NCCN guidelines. Chemotherapy has become complicated and expensive, and this manual lends clarity to an expansive forum. Of course, all the standard agents and protocols are included along with excellent review chapters on nausea/vomiting and dosing modifications. An excellent purchase.

This is the "Bible" of cancer chemotherapy. Every clinic needs a copy.

A must have for oncologists!

This is an excellent handbook. I have found it to be an indispensable reference for daily practice. Highly recommended for practitioners.

Excellent book!
